

ULTRATRONIK® SONIC ATTACK BIRD REPELLER

www.ultratronik.com

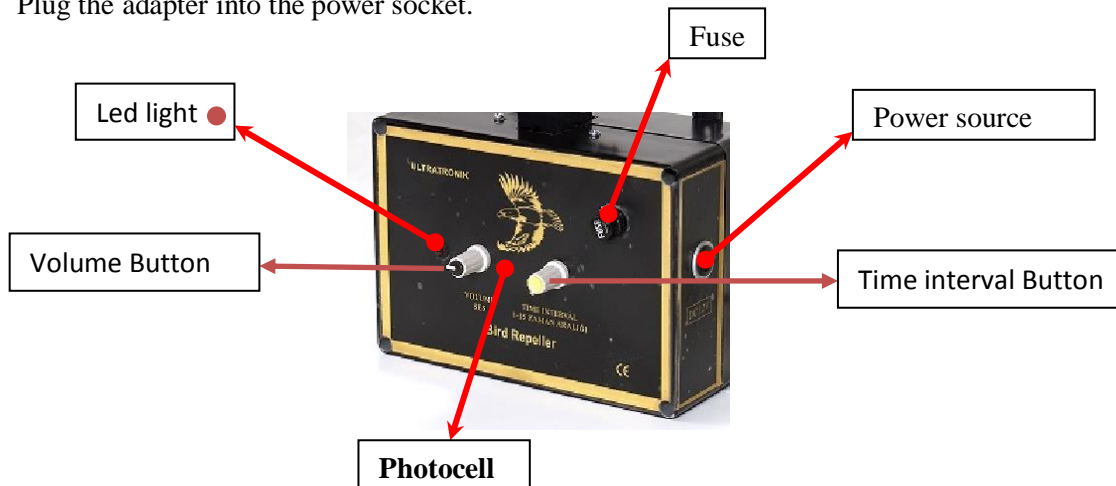

The Most Natural, Effective, Environmental-Friendly Way to Deter Pest Birds!

Nature dictates that certain predatory species of birds hunt and feed on other animal species. Among birds, these predatory habits are especially notable in hawks and owls. Most hawks and owls prey mainly on rats, mice, rabbits, birds and other vertebrate animals. Among birds, the true predators are mostly in the Falcon family, Hawk family and Owl family. Exploiting these predatory tendencies, the **BIRD REPELLER** will produce the predatory calls on the hawk (eagle), falcon and owl species to scare unwelcome birds such as sparrows, blackbirds, pigeons, crows, starlings and various other birds away from your property. This humane and environment-friendly method will solve your pest bird problem without harm to humans and other creatures. In addition, it can also deter open field rodents and rabbits.

INSTALLATION

1. Attach the **BIRD REPELLER** to a post or wall 1 to 2.5 m high where a power source is nearby. Plug the adapter into the power socket.

2. Led light ● indicator located in front of the device flashes at a speed based on the Time Interval. The longer the interval time, the slower the flashing will be. The Time Interval can be set from 5 to 30 minutes by adjusting the knob clockwise. Similarly, you may also adjust the volume control. The **BIRD REPELLER** will broadcast predatory calls every 5 to 30 minutes automatically.
3. There is a built-in **Photocell** in front of the device. It will disable the **BIRD REPELLER** when it is dark.
4. For best results, hang the **BIRD REPELLER** 1 to 2.5 meters above ground. Avoid obstructions within the operating area of the device.
5. It is also recommended that you experiment with various locations to find the most effective position to install the **BIRD REPELLER**.

IMPORTANT NOTES

- Do not immerse the device in water or any other liquids.
- Do not modify or temper the unit's internal components.

SPECIFICATIONS

Power supply (adapter): 110-120VAC, 50/60 cycles
220 – 240 VAC, 50/60 cycles

Output: 12 VDC

Sound: Predatory calls of hawk, falcon and owl species.

Protection Coverage: Up to 1000 m²

Material: Plastic water resistant
